

Submissions to Manufacturing Engineer

Manufacturing Engineer is the manufacturing magazine of the IEE. Its aims are to interest and inform members and subscribers involved with manufacturing. Its readers are members and non members who have declared their interest in manufacturing activities and they range from students through to company directors. The industries they work in cover the entire manufacturing spectrum from automotive to food and drink, and from textiles to aerospace.

Editorial scope – The editorial content covers the entire manufacturing process from initial idea to end user. It covers R&D, design, engineering, automation and robotics, manufacturing IT, manufacturing strategies and supply chain and logistics.

Article length – The normal length for submissions to the publication is 1800-2000 words – this allows for a 4pp feature with sufficient illustrations. Other lengths can be catered for by prior arrangement with the editor.

Style – Although it is not possible to address all the readers in every single article, potential authors should be aware both of the range of readership and the aims of the magazine. In particular please note that we publish articles to interest and inform, and restrict learned paper publication.

General guidelines

- Articles should be in a narrative style with no lists or bullet points
- Diagrams and figures should be kept to a minimum – two or three at most. And it should be noted that they will not appear within the copy but in separate picture boxes.
- Lists of references to other works are not permitted. You should not assume that readers are familiar with other work so if you need to mention it explain what it says and its relevance.

Submissions – in the first instance please email a brief synopsis to the editor. When the feature has been agreed the final version can be submitted by email or on CD in Word or any other compatible word processing format.
